What is TRCroot “Linux Based Integrated Solutions”?

TRCroot is prepared for corporations who would like to establish their corporate network and communication systems on Linux’s enhanced application platform. It consists of package solutions that include installation and after sale support. These packages provide freedom, cost advantage and performance improvement to corporations by combining their software-and hardware-system needs under one umbrella.

Who can utilize TRCroot “Linux Based Integrated Solutions”?

From Small and Medium-sized Enterprises to multinational companies, many corporations can take advantage of TRCroot solutions. TRCroot solution packages are based on Linux foundation, which is also supported by worldwide Information Technology. Corporations, who would like to form their information technology systems with high performance and low cost may choose TRCroot’s solution packages.

To summarize; any company who would like to take advantage of open source code rather than using costly soft wares, would be wise to chose the reliable, high-performance and cost efficient TRCroot Linux Based Solution Packages.

TRCroot Linux Based Solution Packages can be used for;

- Corporate Internet connectivity, management and security,
- In house and outside corporate communication, communication security and monitoring,
- Network management, security and monitoring.

One or more of the TRCroot packages harvested by TURCom’s experience can satisfy corporate system requirements in a dependable and economical manner.
